

## Equitable Food Initiative (EFI) Outcomes & Deliverables

<b>What will the project do?</b> <b>List specific project outputs and outcomes (quantitative and/or qualitative).</b>	<b>How will this be measured/achieved?</b> <b>Describe how you will know if the project is successful (quantitative and/or qualitative targets).</b>
Convene agricultural industry stakeholders and experts and facilitate their ongoing collaboration to develop a standardized skills catalog, training curriculum, and credential system for agricultural skills.	At least 30 workforce development experts and representatives of state agencies, employer associations, worker organizations, training providers, and community colleges will have gathered for 2 days during the first quarter to build consensus on a road map toward credentialing and select a steering committee to develop a work plan.
Hire a new EFI Stakeholder Manager for Credentialing to form and facilitate a steering committee to meet at least bi-monthly through the end of 2024 to design the credentialing roadmap and plan 2025 pilot upskilling for workers and managers.	The Stakeholder Manager for Credentialing has convened at least four meetings of the steering committee, and a road map, work plan, funding plan, and pilot sites for 2025 training are in place.
Recruit and certify more California high road agricultural employers to EFI standards.	At least three more California growers will have begun the EFI certification process, and we will have identified at least a dozen potential pilot sites to begin skills training in 2025.
Provide training on climate and sustainability to California growers.	At least four sustainability trainings have been conducted, and a fee-for-service model is in place to expand climate trainings in 2025 and beyond.
